EXCLUSIVE LEAK: Trudeau installing weapons armouries, interrogation rooms for Ministry of Climate Change - The Counter Signal

4 minutes

Architectural plans have been leaked to The Counter Signal, revealing Trudeau's sinister plans to weaponize the climate change agenda.

The Ministry of Environment & Climate Change Canada (ECCC) is building a new facility in Winnipeg that will be home to a firearms armoury, interrogation rooms, biological labs, media relations offices, "controlled quiet rooms," and intelligence facilities.

The plans, which were drawn up by a firm in Winnipeg, open a window into Trudeau's future plans for Climate Enforcement.

Down the hall from the proposed "Firearms Storage" rooms are several evidence rooms, interrogation suites, and adjacent recording rooms.

Leaked plans for a Climate Police Armory

According to a recently posted Indeed.com ad, the Ministry [is searching](#) to recruit a battalion of Climate "Pollution" Officers, a unit within the coldly named "Environmental Enforcement Directorate."

If you emit too much carbon or use too much fertilizer, you may just be on the Climate Communists' hit list.

The entire facility that was leaked to The Counter Signal is sketched to be over 50,000 square feet, will house hundreds of ECCC staff, and will also be home to weather forecasting staff.

The [Impact Assessment Act](#) (IAA), which was quietly passed in the final days of Trudeau's majority government, grants sweeping power to Ministerial "Enforcement Officers." But, until now, little has

been explained about where and how Climate Police will be deployed.

The IAA empowers agents of the Ministry of Climate Change to enter premises without a warrant to “verify compliance or prevent non-compliance with [the Act].

Trudeau’s Climate Police may enter any project location that affects the environment to take photographs, access computer systems and communication devices, and “direct any person to put any machinery, vehicle or equipment in the place into operation or to cease operating it.” Climate Police may also prohibit access to the location entirely.

It seems to be no coincidence that this Climate Police armoury was placed in the heartland of agricultural production in Canada. This information comes just days after agents dispatched by ECCC were accused of trespassing on private land in Saskatchewan to collect Nitrogen samples, the newest target of Trudeau’s climate change agenda.

According to the landowners who confronted the federal agents trespassing on their land, they were told that the purpose of them being there was to test the water in the farmers’ dugouts to measure nitrate levels.

Trudeau’s government recently announced a policy to [reduce the use of fertilizer](#) on Canadian farms by 30%. This policy has been widely criticized by farmers across the country and by [provincial governments in the Western provinces](#), with opponents saying it will cripple the food supply.

Some observers have said that there is reason to suspect that these actions are the first steps in replicating the attacks on

farmers that have provoked widespread unrest in the Netherlands and elsewhere in Europe.

While the federal government has not yet confirmed it, there is speculation that the water sampling we now know is underway will be used as baseline measurements to enforce reductions in fertilizer usage going forward.

The Counter Signal has reached out to ECCC for comment.
